## Who – Who We Are

### Fentanyl Fathers

A non-profit working to educate kids and warn communities about the dangers of fentanyl and counterfeit pills through the lens of bereaved parents. Our goal is to spare families from waking up to the same grief we share in every day.

### **Mission:**

To establish a world where no adolescent succumbs to fentanyl poisoning or overdose, by raising awareness about the dangers of fentanyl, counterfeit pills, and effective overdose response measures.

# Hello, I'm Drew Swan

I died April 3, 2013 from synthetic Opioids.

# The Numbers

As reported by the CDC:

- There were an estimated 101,078 drug overdose deaths in the US for the 12-month period ending April 2021.
- The CDC indicated that more than 110,000 Americans died from a drug overdose in the 12-months ending in January 2023.

April  
2020-2021

110,133

January  
2022-2023

## The Numbers

Overall, 75.8% involved at least one opioid, with 75,929 (68.9%) involving synthetic opioids, primarily illicitly manufactured Fentanyl or Fentanyl analogs.

75,929

68.9%  
Synthetic Opioids

# The Numbers

- **High school-aged** overdose deaths rose by 114% between 2019 and 2021
  - **Fentanyl** accounted for 77% of those deaths
- Among adolescent overdose decedents (ages 10 to 19) only 35% of them had previous opioid use history, yet 90% of deaths were opioid related
  - **1 in 4** had evidence of counterfeit pill involvement.

2 mg = Potentially *Lethal Dose* of Fentanyl

There are **2,000 mg** in a packet of sugar by comparison

FAKE PRESCRIPTION PILLS • WIDELY AVAILABLE • INCREASINGLY LETHAL

**DEA LAB TESTING REVEALS THAT**

**7** OUT OF EVERY **10** PILLS

**WITH FENTANYL CONTAIN A POTENTIALLY**

**LETHAL DOSE**

**COUNTERFEIT PILLS OFTEN CONTAIN  
FENTANYL AND ARE MORE LETHAL  
THAN EVER BEFORE**

# Counterfeit Pills

- These pills are being sold on social media to look like Oxycontin, Percocet, Vicodin, Xanax, and Adderall
- Assume every pill you purchase today WILL KILL YOU
- Fentanyl powder is also being added to street drug supplies like cocaine, heroin, and methamphetamine

# What Is An Opioid Overdose?

## Opioids Attaching To Receptors

The brain has many, many receptors for opioids. An overdose occurs when too much of an opioid, such as oxycodone or fentanyl, fits in too many receptors slowing and then stopping the breathing.

# Naloxone In The Brain

## Naloxone Reversing An Overdose

Naloxone has a stronger affinity to the opioid receptors than opioids, so it knocks the opioids off the receptors for a short time (30-90 minutes). This allows the person to breathe again and reverse the overdose.

# SIGNS OF OPIOID OVERDOSE

# Naloxone In Action

- Works on ANY opiate ANY time
- Reverses opiate effects- sedation and respiratory depression
- Causes sudden withdrawal – an unpleasant experience
- **No contraindications for use in the event of a suspected overdose**
- Routinely used by EMS (often in larger doses)

*There will be no effect on the individual if an opiate is not present*

# Steps To Administering Nasal Naloxone

## Step 1: Call 9-1-1

- Request EMS or fire department

### Law 768.13 “**Good Samaritan Act**”

(3) As used in this section:

(d) “Who participates in emergency response activities...is not liable for any civil damages” means reporting a drug overdose or other medical emergency to law enforcement, the 9-1-1 system, a poison control center, or medical provider, or assisting someone in reporting a drug overdose or other medical emergency.

# Steps To Administering Nasal Naloxone

## Step 2: *Assess Situation*

- Do not disturb the area
- Check consciousness

## Steps To Administering Nasal Naloxone

### Step 3: Give Nasal Naloxone

- Remove 1 – 4mg dose of the Nasal Narcan, or 8mg dose of Nasal Kloxxado
- Tilt individual's head back
- Dispense dose as directed into 1 nostril

## Steps To Administering Nasal Naloxone

### Step 4: Possible 2<sup>nd</sup> Dose

- Wait 2-3 minutes
- If no change in victim's condition, administer the second dose in the opposite nostril

# Steps To Administering Nasal Naloxone

## Step 5: **Withdrawal**

- Place individual on their side in the recovery position (left side)
- Possible vomiting, diarrhea, and/or sweating
- Possible agitated behavior
